	HR, IR, LR	HR, IR	LR	HR	IR	LR	HR	IR	LR	HR	IR	LR	HR	IR	LR
Risk Score															
High Risk (HR): STS o. ES II > 8% / ES I >20%						*			*						
Int. Risk (IR): STS o. ES II 4-8% / ES I 10-20%															
Low Risk (LR): STS o. ES II < 4% / ES I < 10%															
Contraindication against SAVR															
Active malignant disease (life expectancy >1y)															
Prognosis limiting comorbidity															
Porcelain aorta															
Chest-radiation / -deformity															
Cardiovascular criteria pro TAVI															
Degenerated aortic bioprosthesis															
Previous cardiac surgery (e.g. IMA-bypass)															
Additional mitral regurgitation, suited for intervention															
CAD suited for PCI															
Internal carotid stenosis >75%, bilateral															
Additional criteria pro TAVI															
Moderate organ dysfunction (number)			1			1			≥ 2						
Severe organ dysfunction (number)			1			1			1				≥ 2		≥ 2
Frailty															
Multimorbidity															
Contraindication against (TF-)TAVI															
no vascular access	TA-TAVI	TA-TAVI	TA-TAVI	TA-TAVI	TA-TAVI		TA-TAVI	(TA-TAVI)		TA-TAVI			TA-TAVI		
absolute contraindication															
relative contraindication															
Cardiovascular criteria pro SAVR															
additional cardiac condition requiring surgery															

* = TF-TAVI superior (Partner-3 Study 1y death, stroke, rehospitalisation) or non-inferior (Evolut Low Risk Study 2y death, stroke)

	Decision Heart Team	Patient's preference

Date patient visit: Heart Surgeon: Cardiologist: Anesthesiologist

Explanations to the indication matrix

Contraindications against SAVR																						
Porcelain aorta	extensive, circumferential calcification of the ascending aorta																					
Chest-radiation / -deformity	former radiation of the chest, thorax deformity prohibitive for surgery																					
Active malignant disease	e.g. hematological malignant disorders, solid neoplasms with life expectancy >1 year																					
Comorbidity, prognosis-limiting	e.g. multiple sclerosis, Parkinson's disease, COPD Gold IV, life expectancy >1 year (individual decision)																					
Cardiovascular criteria pro TAVI	<ul style="list-style-type: none"> • Degenerated aortic bioprosthesis and age ≥70 years • Previous cardiac surgery (e.g. IMA bypass) and age ≥70 years • Additional mitral regurgitation suited for intervention and age ≥75 years • CAD suited for PCI (according to heart team evaluation) and age ≥75 years • Internal carotid stenosis ≥75%, bilateral and age ≥70 years 																					
Additional criteria pro TAVI																						
Organ dysfunction	<table border="0"> <tr> <td></td> <td>Moderate</td> <td>Severe</td> </tr> <tr> <td>Heart:</td> <td>• EF 30-50%,</td> <td>• EF <30%,</td> </tr> <tr> <td>Lung:</td> <td>• VC 50-80%, FEV1 50-79%</td> <td>• VC <50%, FEV1 <50% predicted</td> </tr> <tr> <td>Kidney:</td> <td>predicted</td> <td>• GFR <30</td> </tr> <tr> <td>Liver:</td> <td>• GFR 30-50</td> <td>• CHILD > A</td> </tr> <tr> <td>CNS:</td> <td>• CHILD A</td> <td>• Neurological disease with relevant limitation in daily activities</td> </tr> <tr> <td></td> <td>• Mild neurological disease with minimal limitation in daily activities</td> <td></td> </tr> </table>		Moderate	Severe	Heart:	• EF 30-50%,	• EF <30%,	Lung:	• VC 50-80%, FEV1 50-79%	• VC <50%, FEV1 <50% predicted	Kidney:	predicted	• GFR <30	Liver:	• GFR 30-50	• CHILD > A	CNS:	• CHILD A	• Neurological disease with relevant limitation in daily activities		• Mild neurological disease with minimal limitation in daily activities	
	Moderate	Severe																				
Heart:	• EF 30-50%,	• EF <30%,																				
Lung:	• VC 50-80%, FEV1 50-79%	• VC <50%, FEV1 <50% predicted																				
Kidney:	predicted	• GFR <30																				
Liver:	• GFR 30-50	• CHILD > A																				
CNS:	• CHILD A	• Neurological disease with relevant limitation in daily activities																				
	• Mild neurological disease with minimal limitation in daily activities																					
Frailty assessed by EFT (Essential Frailty Toolset)-Test, (Frailty requires at least 3 of 5 possible points)																						
<ul style="list-style-type: none"> • Preprocedural anemia: Hb f <12 g/dl / m <13 g/dl (1 pt) • Hypalbuminemia < 3,5 g/dl (1pt) 	<ul style="list-style-type: none"> • Lower extremity weakness: 5 sit to stand repetitions >15s (1 pt), not possible (2 pts) • Cognitive impairment: unable to recall 3 out of 3 words after a distractive task or MMT-Score <24 (1 pt) 																					
Multimorbidity (≥2 conditions required)																						
<ul style="list-style-type: none"> • IDDM • Oxygen dependency • Obesity with BMI > 35 • Cognitive impairment 	<ul style="list-style-type: none"> • Arthritis / arthralgia / degen. spine disease / osteoporosis, with severely impaired mobility • Depression/anxiety disorder requiring therapy 																					
Contraindications against (TF-)TAVI																						
Absolute contraindications:																						
<ul style="list-style-type: none"> • All patients: no vascular access (prohibitive PAD, lack of an alternative access) (probably TA-TAVI possible); Endocarditis. • Almost all patients (exceptions may be possible in selected cases with no surgical option): too short distance between coronary ostia and aortic valve annulus, aortic annulus size out of range of available TAVI prosthesis sizes, mobile thrombi in left ventricle. 																						
Relative contraindications:																						
<ul style="list-style-type: none"> • unfavorable aortic root morphology, • unfavorable valve morphology (e.g. bicuspid valve, extent of calcification, pattern of calcification), • mobile thrombi of the aorta 																						
Cardiovascular criteria pro SAVR																						
<ul style="list-style-type: none"> • Additional cardiac conditions requiring surgery, e.g. structural mitral regurgitation, tricuspid regurgitation • aneurysm of the ascending aorta 	<ul style="list-style-type: none"> • CAD not suited for PCI (according to heart team evaluation) • Need for myectomy in LVOT-hypertrophy
